Abstract

Accounting is the process by which financial information about a business is recorded, classified, summarized and communicated to relevant people who require that information. SME manager require the financial report to make a strategy decision for their business. Unfortunately, lack of accounting knowledge and experience especially in SME rice business, human error has been found on accounting operation, consequently it cannot provides financial information to manager in the proper time. Therefore a development of accounting application for rice business has been proposed in this paper in order to provide useful information of accounting for SME rise business by using Microsoft Visual Basic 2008 and Microsoft SQL Server 2005 as major tools. As a result, this project can do accounting subsystem operation such as Cost Account, Debtor Account, as well as Creditor Account, and it can provides the Rice Business operations more efficient and make a decision support for SME rice business to manger.
