Abstract

Fuji Pet Shop has opened a shop selling food animals such as dog food and cat food, toys and accessories. Customers currently have to travel to your feed themselves at a FUJI PET SHOP shop or order - order book over the phone. The old system is still taking notes with paper. The problem of data loss. Data redundancy The trade must pass a storefront only. It is sometimes the product in stock not enough to meet customer demand. Because the restaurant does not have a system to manage inventory and customer order fodder. Still not enough We therefore need to be made to order products via the website as an alternative. In order to facilitate customers who wish to purchase fodder. And save more time The product meets the requirements. For the shopkeepers to know that you do some kind of order. And has made the payment or not. The system has developed the programming language PHP and database management with SQL Xampp.
