

## **Cooperative Education Report**

**Title: Research/Media Officer at IMS  
Investment Management Services Pvt. Ltd.**

**Written by**

Mr. Amar Nath Shrestha

**Student ID: 5708040078**

**This Report Submitted in Partial Fulfillment of the Requirements for  
Cooperative Education, Faculty of Business Administration**

**Academic Semester 2/2017**

**Siam University**

**Title:** Research/Media Officer at Investment Management Services

**Written by:** Amar Nath Shrestha

**Department:** IBBA, Finance and Banking

**Academic Advisor:** Dr. Parham Porouhan

We have approved this cooperative report as a partial fulfillment of the cooperative education program semester 2/2017

Oral Presentation Committees

(Dr. Parham Porouhan)

Academic Advisor

Suramya Khanal

(Mr. Suramya Khanal)

Job Supervisor

Ying Sawhney -

(.....)

Cooperative Committee

Maruj Lim

(Asst.Prof. Maruj Limpawattana, Ph.D.)

Assistant President

and Director of Cooperative Education

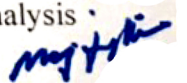

**Project Title** : Research/Media Officer at Investment Management Services  
**By** : Amar Nath Shrestha  
**Advisor** : Dr.Parham Porouhan  
**Degree** : Bachelor of  
**Major** : Finance and Banking  
**Faculty** : Business Administration  
**Semester / Academic year** : 1/2018

### **Abstract**

This internship is conducted at IMS Investment Management Services Pvt. Ltd., which is one of the leading service providers in the field of Capital Market in Nepal. It provides the most detailed analysis of the portfolio and helps in making decisions on the go, anywhere, anytime. I completed the cooperative education here at IMS. This report includes all of my activities performed during the tenure of my cooperative program. My job detail basically includes Data entry, analysis and interpretation. Every quarter all the listed companies in NEPSE publish their report on National Daily, based on that report I enter the data into excel sheet. After that I compile the major indicators of performance and if not given I compute them for analysis. All the data are compiled in one sheet for ease in comparison. Based on the indicators, the companies are analyzed (1) with its past performance (2) with its competitors. For example; all the listed commercial banks are compared and analyzed in one article. Post analysis, a news story is created in a manner that is understandable to normal investors and layman explaining the current performance of the companies being analyzed and the industry as a whole.

Finally, after the proofreading and editing is done by my project supervisor, the story is uploaded in the website, sharesansar.com.

During the tenure of my internship, I got an opportunity to apply the skills and knowledge that I had acquired in college. Being a finance major student and having a keen interest in capital market, this time has been really fruitful to me. Apart from learning how to do fundamental and technical analysis of companies I also have learned soft-skills that will remain with me forever.

**Keywords:** *Research and Media officer/ Online Financial portal/ Software developer/ Brokerage firm/ Merchant banker*

## **Acknowledgements**

I would like to begin by thanking Kathmandu College of Management (KCM) and Siam University for providing me an opportunity to enter into the real market and for providing a platform where I could apply my theoretical knowledge. If it weren't for this program, I wouldn't have known of the world beyond books. Through this internship I've found myself and my understanding of the market grow and for this I will forever be grateful. I would also like to express my deepest gratitude to Investment Management Services (IMS) for allowing me to be a part of their family and providing me exposure to the market insights and how the company works. The challenging and conducive work environment has enabled me to push my limits and learn things that I didn't know before. I am especially thankful to my Project Manager, Suramya Khanal. He has been more of a mentor to me than supervisor. With him I have been able to establish relationship between what I had learned in college and the practical world. Similarly, I would also like to express a lot of appreciation and love for my colleagues, who helped me in my endeavors during this tenure. I would also like to thank them for constant support.

Finally, I would like to thank Kathmandu College of Management (KCM)'s management team who have made this program possible. If it weren't for this program, I would have missed all these learnings.

Amar Nath Shrestha

## Chapter 1: Introduction

### 1. Company profile

Picture 1: Company Logo

Investment Management Services Pvt. Ltd. (IMS) is an investment management company. It is one of the leading service providers in the field of Capital market in Nepal. It provides the most detailed analysis of the portfolio and make decisions on the go, anywhere, anytime. It was established by three friends on 2011. It has been serving its clients and well-wishers for 7 years now. ShareSansar is one of its subsidiary that publishes financial news in its website about the capital markets and also the analytical research-based stories. It is the no. 1 online financial portal of Nepal. ShareSansar also provides training classes about the capital market. There are two types of courses provided: Fundamental or Basic training and Technical Analysis training. Also, IMS has been developing software like Margin Pro, Portfolio Tracker and ShareSansar.com itself. IMS has also been providing brokerage services through a broker, Creative Securities (Broker No. 40). It has now launched a Merchant Bank namely, Aakash capital. Aakash Capital is limited to Portfolio Management for now and are planning for Issue Manager and Share Registrar.

#### a. Organization structure

The organization structure of Investment Management Services is shown below. Here, IMS has 4 different operations. Sharesansar.com being Nepal's no. 1 online financial portal that provides financial news to its viewers and investors. IMS also develops software. Sharesansar.com, Portfolio tracker, and Margin Pro are some of the software developed by IMS. IMS has also been providing brokerage services through a broker, Creative Securities (Broker No. 40). It has now launched a Merchant Bank namely, Aakash capital.

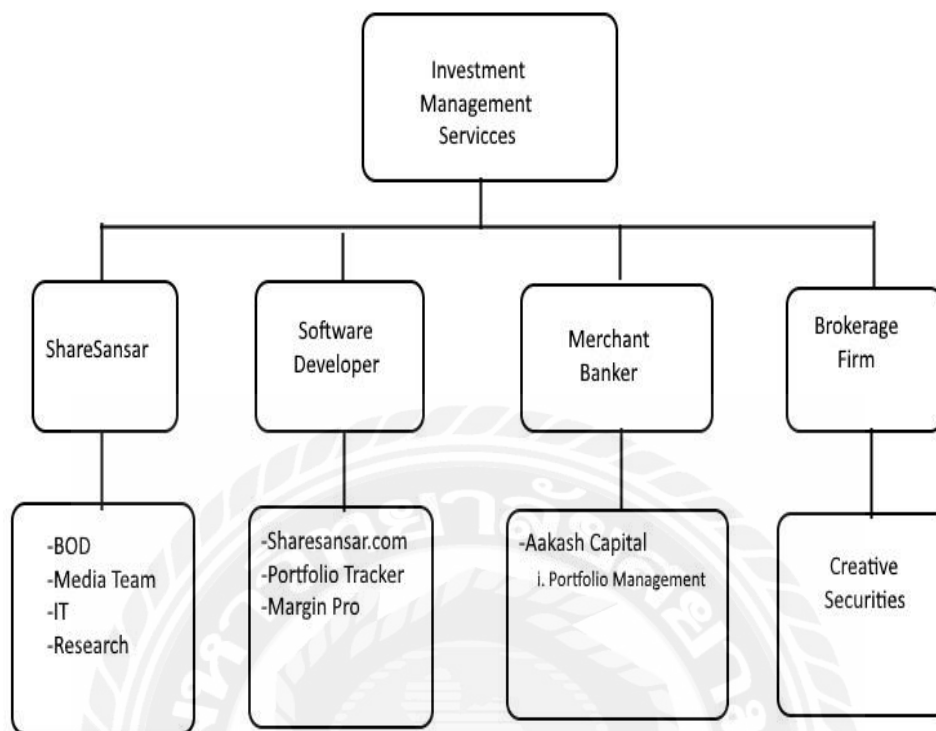

Figure 1: Organization structure

#### b. Organization Hierarchy

There is 3 Board of Directors at Sharesansar. Project manager and Human resource works under BOD. Project manager manages the media and research team as well as Information technology. Accounts, Clerical & compliance and Reception & support works under Human resource.

My designation here at IMS Investment Management Services Pvt. Ltd., was Research/ Media Officer and worked in Research and Media Department. I worked under the Project Manager.

The hierarchy at Sharesansar is shown below.

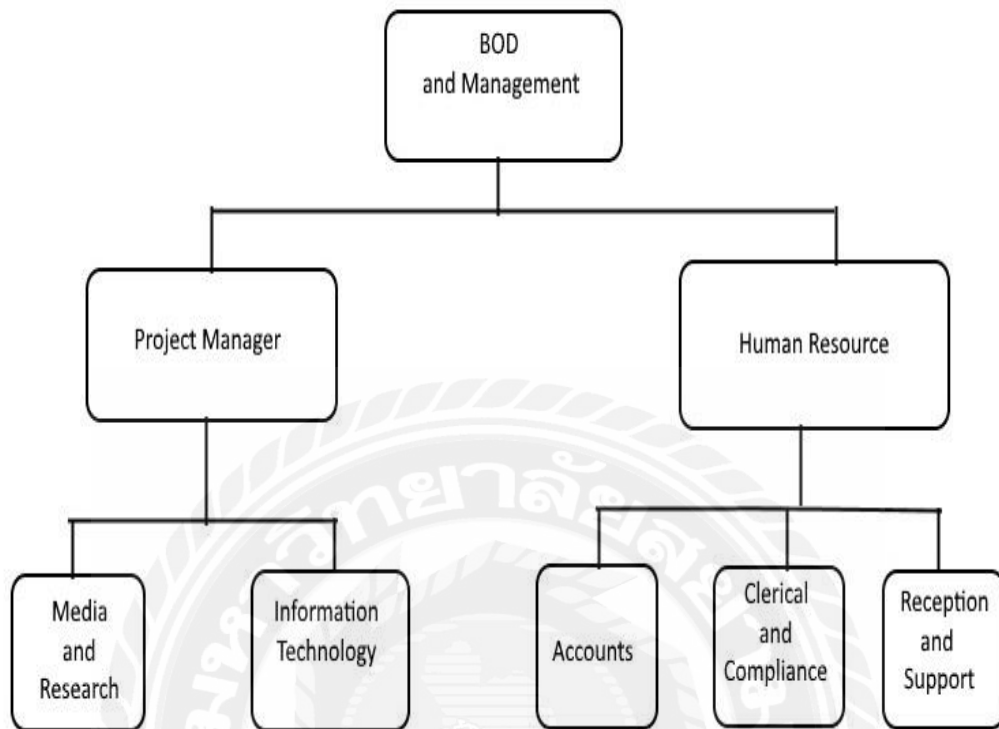

Figure 2: Organization hierarchy

## 2. Objectives of the study

- i. To gain experience in capital market and stock trading.
- ii. To fulfill the BBA program by the completion of COOP education required by the university.
- iii. To apply the knowledge gained in the class into the professional life.
- iv. To provide the latest financial news to the investors regarding the stock market i.e. NEPSE.
- v. To cope up with the new innovations and the colleagues according to the new trends in the market.
- vi. To analyze the data (financial reports) and presenting my views regarding the outcomes of my research for the investors.

### 3. Problem statement

The internship has been performed as a requirement of the course for the completion of the undergraduate degree at Siam university. This is a part of curriculum to complete a three-month internship for the better understanding of a corporate industry and gain experience of working in an actual market before the completion of the undergraduate degree. This internship also provides an opportunity to seek, identify and further develop and appropriate level of professionalism among the students.

This report is about the company analysis and capital market. It talks about how investors need to analyze the company before investing in them. This report includes my research on the companies listed in Nepal Stock Exchange (NEPSE) and a hypothetical portfolio of the companies of the same. The gist of this report is to implement theoretical knowledge obtained from lectures, projects, books etc. in the practical world in order to broaden the knowledge by working in different fields of study and performing in the real world. In practical world, the stated theory knowledge may not be implemented accordingly. The provided financial news through analysis doesn't suggest the investors to act according to the information from the article.

Investors are mostly depended on the financial news. They need all the information of the companies before investing. People view the news published on website i.e. sharesansar.com and take decisions according to the news published which is wrong. The analysis made for publishing the news may not always be correct. It might be the analysis of only few factors. Investors must not be fully depended on the news and must analyze the companies by themselves before making investment decisions. Here, at IMS, Sharesansar also offers fundamental analysis as well as technical analysis training of the stocks.

### 4. Expected outcomes

- i. Demonstrate an understanding of professional and ethical practice.
- ii. Development of professionalism and work ethics.
- iii. Improve communication skills as well as team work
- iv. Experience on corporate work practices.
- v. Ability to read and understand financial statements

### 5. Limitation of the study

- i. The market is never consistent.
- ii. Time constraint
- iii. The projected outcomes vary with the actual results. (i.e. the share price or the Index)
- iv. The companies may not provide the actual data.

- v. The analysis is fully based on secondary data so the accuracy of data is a major concern
- vi. Only 3<sup>rd</sup> quarter report of FY 2073/74 and 3<sup>rd</sup> quarter report of FY 2074/75 of commercial banks are taken.

## Chapter 2: Literature review

### 1. Main theory and concept applied alongside with the given job description

#### a. Nepal Stock Exchange (NEPSE)

Nepal Stock Exchange is the only Stock Market of Nepal. It was established under the company act, operating under Securities Exchange Act, 1983. Its first trading floor was opened on January 13, 1994. The shareholders of NEPSE are Government of Nepal, Nepal Rastra Bank and Nepal Industrial Development Corporation. The objective of NEPSE is to impart free marketability and liquidity to the government and corporate securities by providing transactions in its trading floor through member, market intermediaries, such as broker, market makers etc. (NEPSE, 2018)

#### b. Financial Management

Financial management is the science of fund management. It includes saving money and often includes lending money which deals with the concept of time, money, and risk and how they are interrelated. It also deals with how money is spent and budgeted. Traditionally, financial management was considered a branch of knowledge with focus on the procurement of funds. The core of modern approach evolved around, is procurement of the least cost of funds and its effective utilization for maximization of shareholders' wealth.

Capital is the investment supplied by the investors to the corporation. The fund is raised by corporation from the investors. The main job of financial manager is to raise fund for a corporation, maximize the wealth of corporation, meet the interests of investors who supplied capital in the corporation. The capital structure is the mix of the long-term sources of funds used by the firm. The primary objective of capital structure decision is to maximize the market value of the firm through appropriate mix of long term sources of the funds.

The primary objective of capital structure decision is to maximize the market value of the firm through appropriate mix of long term sources of the funds. Capital structure that minimizes the firm's cost of capital and thereby maximizes the value of the firm. Minimum return that must be generated by a corporation from the use of fund supplied by investors in each source of capital is given as:

$$K_o = K_i \frac{B}{(B + S)} + K \frac{S}{(B + S)}$$

i. WACC = (Kd)(1 - t)(Wd) + (Ke)(We)

(Dhakal, 2016)

c. Capital Asset Pricing Model (CAPM)

The capital asset pricing model (CAPM) is a model that describes the relationship between risk and expected return that is used in the pricing of risky securities. The CAPM says that there is a positive relationship between the expected returns of the stocks and its systematic risk, beta. It is widely used in a) Corporate Project Valuation b) Portfolio Management c) Evaluating Portfolio Managers d) Cost-of-capital determination. The failure of the CAPM implies that the market portfolio is not efficient. (CAPM and Empirical evidence, 2016)

Although the empirical evidence on the CAPM is mixed, it is widely used because of the valuable insights it offers and its accuracy is satisfactory for most practical applications. This relationship between expected returns and risk is very useful because of two important things. Firstly, it produces a benchmark for evaluating various investments. Secondly, it helps us to make an informed anticipation about the return that can be expected from an asset that has not yet been traded in the market.

$$\bar{r}_a = r_f + \beta_a(\bar{r}_m - r_f)$$

Where:

$r_f$  = Risk free rate

$\beta_a$  = Beta of the security

$\bar{r}_m$  = Expected market return (investopedia, 2016)

Risk-free rate is the rate of a government bond of a country. In case of Nepal, Nepal Rastra Bank issues the Treasury bills. The measure of risk, by measuring fluctuation of the stock prices relative to the base market is Beta. (CFI, 2018). The long-term assumption about how the investment works over its life is expected return.

d. Company analysis

The process carried out by investors in order to evaluate securities, gather information regarding to the company's profile, products and services as well as profitability is known as Company Analysis. It can simply be called 'fundamental analysis.' A company analysis consists the basic information of the company i.e. mission statement and manifestation and the goals and values. History of the company is also considered by the investors during the process of company analysis focusing on events which have contributed in shaping the company.

The steps for conducting company analysis are:

- i. Determining the type of analysis that would be suitable for the selected company
- ii. Researching well regarding the methods for analysis. Also, for company analysis, expected outcomes must be understood. It is vital in making the right choice for the method of analysis.
- iii. Implementation of the selected method for conducting financial analysis. It should include internal as well as external factors affecting the business.
- iv. Use of statistics can be used as a support the major findings.
- v. The final step is reviewing the results. The corrections are made to the weaknesses. Company analysis is used in concluding issues and determining the possible solutions. It is conducted to reflect an image of the firm at a specific time, hence providing the best way of upgrading firm, internally as well as externally. (Ready Ratios, n.d.)

The two types of company analysis are:

- i. Fundamental analysis  
Fundamental analysis is a method of valuing securities such as stocks and bonds, that attempts to discover their true value by examining related economic and financial factors. Macroeconomic factors such as the overall economy and industry conditions, and microeconomic factors such as financial conditions, and company management are studied by the analysts. (Investopedia, n.d.) It is a stock valuation method that uses financial and economic analysis to predict the movement of stock prices. The analysis attempts to find the intrinsic value of a security that helps investors to make decisions. The fundamental information that is analyzed can include a company's financial reports and non-financial information such as estimates of the growth of demand for products sold by the company, industry comparisons, and economy-wide changes in government policies, etc. The factors that are required to be looked into in fundamental analysis are: Revenues, expenses and income, Growth prospects for the company, competitiveness and expected return on equity or assets. (Glen, 2018)
- ii. Technical analysis  
Technical analysis is a trading tool employed for evaluating securities and try to forecast the future movement by analyzing statistics gathered through trading activity like price and volume movements. It focuses on charts of price movement and various analytical tools to evaluate stock's strength or weakness and forecast future price changes. This analysis is used to attempt to forecast the price movement of virtually any tradable instrument that is generally subject to forces of supply and demand that includes stocks, bonds, futures and currency pairs. It can also be viewed as the study of supply and demand forces in the market price movements of a security. It

predicts the short-term price travels which is important criteria for selecting the company to invest. Technical analysis is done only after deducing a trend and judging the future movement of the stock on the basis of the trend. It assumes that the market is efficient and the price has already taken into consideration the other factors related to the company. (S.Ramprasad, 2010) Commonly used technical indicators include trendlines, pivot point, moving average convergence divergence (MACD) indicator. (Investopedia, n.d.) The factors for technical analysis are Historical pricing of the stock, trading volume over time and industry trading trends. (Glen, 2018)

## Chapter 3: Methodology

1. Roles and responsibilities assigned by the company
  - a. Work with Research/Media Department for development of research-based content

All the public companies listed in NEPSE require to publish the quarterly reports every year. They need to publish all four quarterly reports every three months. These reports are published on a daily newspaper, company's website, financial newspaper, etc. For the research purpose, the data from these reports are recorded in Microsoft Excel. Then, these data can be compared with the previous Fiscal Year's data for the analysis.

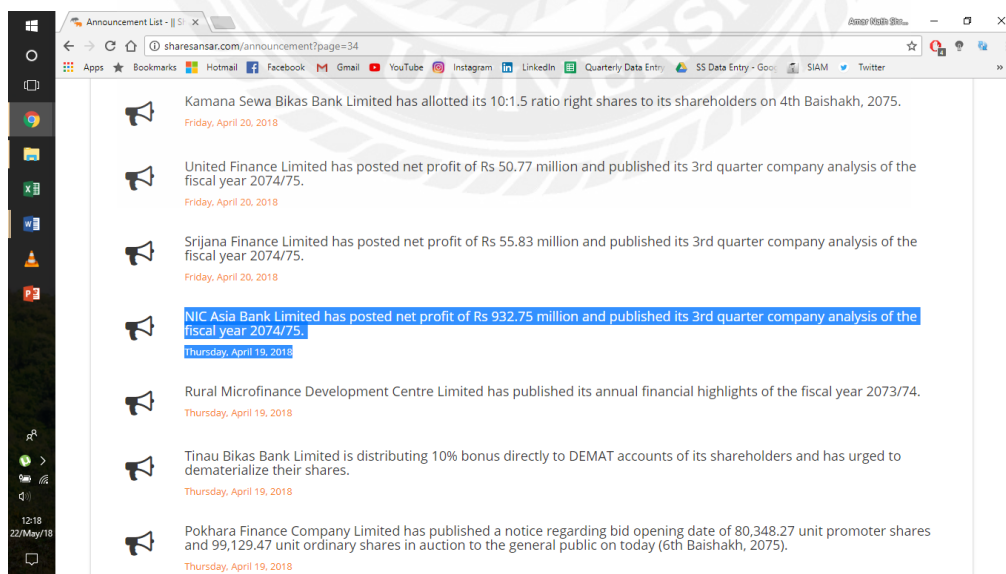

- b. Coordinate with IT Department for financials data entry of companies listed in Nepal Stock Exchange

For publishing the data collected, a standard format is created for the entry of the data to the website. The data collected is recorded in a standard format in Microsoft excel and checked thoroughly. These data are uploaded to the software for the analysis purpose.

### 2. Collection of data

- a. For Company analysis

The method of data collection was only Secondary method. The data was extracted from the newspaper and the website. Two websites were used for the data collection. Sharesansar.com and merolagani.com. Sharesansar uploads the financial reports of the companies every day when it is published by the companies.

Picture 1: Screenshot of data collection method (*Sharesansar.com, 2018*)

b. For hypothetical portfolio

The stocks picked for the hypothetical portfolio are listed companies in Nepal Stock Exchange (NEPSE). Treasury bills provided by Nepal Rastra Bank (NRB) is taken as the risk-free rate. NEPSE index is taken as a base. The stocks picked for the hypothetical portfolio has been diversified by taking 3 of the Commercial banks, 1 manufacturing company, 1 hotel, 1 life insurance company, 1 mutual equity fund, 1 finance company, 1 hydropower company and 1 categorized as others namely Nepal Doorsanchar Company (NTC).

The historical weekend price data/indices of the stocks were taken from website of Nepal Stock Exchange, Sharesansar.com and merolagani.com. The risk-free rates i.e. 91 days T-bill rates is taken from the website of Nepal Rastra Bank Limited (NRB), the central bank of Nepal.

For the prediction of hypothetical portfolio, the following steps are taken:

- i. Calculate % return of each stock between each weekend and annualize them.

$$\text{Weekly return} = \frac{\text{Current price} - \text{Historical price}}{\text{Historical price}}$$

For annualized return,

$$\text{Annualized return} = (1 + \text{weekly return})^{52} - 1$$

- ii. Calculate average return (Expected Return), Variance, Standard Deviation of Returns, CV, Highest Value, Lowest Value, Range of the returns of each stock.

$$\text{Expected return} = \frac{RB - RA}{RA}$$

To calculate the standard deviation of the stocks and NEPSE, given formulae is used,

$$\text{Standard Deviation } (\sigma_m) = \sqrt{\sigma_m^2} = \sqrt{[\sum p_i [R_m - E(R_m)]^2]}$$

- iii. Calculate % return of NEPSE index between each weekend and annualize them.
- iv. Calculate average return (Expected Return), Variance, Standard Deviation of Returns, CV, Highest Value, Lowest Value, Range of the returns of NEPSE Return.
- v. Calculate average risk-free rate (91 days T-bill rate) and annualize them.
- vi. Calculate average ( $R_m - R_f$ ) over the period.  $R_m$  is the average NEPSE return over the period.

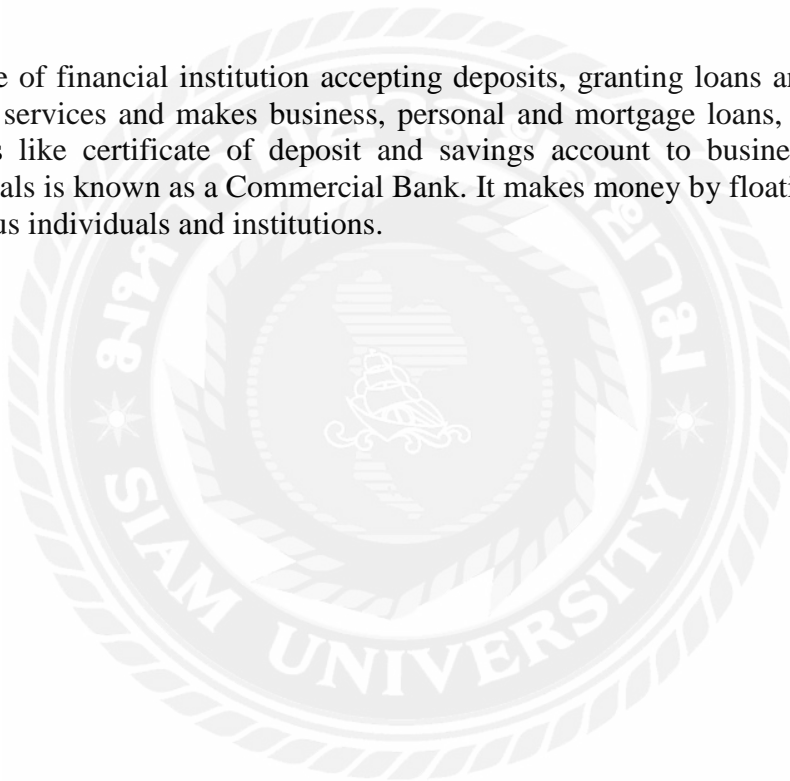

## **Chapter 4: Results and discussion**

### **1. Contributions of student made during the internship**

As a Media/Research Officer at IMS, I was assigned to do the data entry of the company's financial statement and analyze them and publish the results as a news article. Example of the article is given below.

See the performance of all 28 commercial banks as per their financial statement of Q3 FY2074/75; Rastriya Banijya Bank, NIB, Nabil and Nepal Bank lead on major indicators

The type of financial institution accepting deposits, granting loans and offers account services and makes business, personal and mortgage loans, provides products like certificate of deposit and savings account to businesses and individuals is known as a Commercial Bank. It makes money by floating loans to various individuals and institutions.

| Table showing Capital, Reserve and Net Profit |                       |          |          |                       |          |          |                          |          |          |

Table 1:Capital, Reserve and Net Profit

#### NOTE:

Table is sorted in descending order i.e. highest capital being first.

ADBL's preference share capital is excluded.

Net Profit highlighted with green represents highest among banks.

Banks and Financial Institutions (BFIs) must publish financial statement every quarter with which stakeholders of the company make analysis and know the details about the company performance. Financial statements are the only authorized report as published by the respective company via which plays a crucial role in decision making for making an investment. It contains all the major fundamentals of the company.

All 28 commercial banks have published their financial statements of their performance till Chaitra 2074 i.e. Q3 FY 2074/75. For the ease of investors and visitors of our site, we came out with news which summarizes all the major fundamental factors that one must go through before pouring their hard-earned money. This article focuses on major factors like Capital, Reserves, Net profit, EPS, Net Worth and Price Earning (P/E) ratio.

Rastriya Banijya Bank, Nepal Investment Bank, Nabil Bank, Nepal Bank and Everest Bank have been able to be the top 5 highest profit makers until the end of third quarter.

As per the minimum capital requirement directed by the Nepal Rastra Bank, commercial Banks must raise their paid-up capital to NRs. 8 billion. The methods used by the banks for raising their capital to NRs. 8 billion are Mergers and Acquisition, issuing right shares, bonus shares and issuing Further Public Offering (FPO).

According to the third quarter report of the commercial banks, 22 of the commercial banks have been successful in meeting up the required capital. Nepal Investment Bank Limited (NIB) stands first raising its capital to NRs. 10.74 Arba. 6 of them are still in the process of meeting up the required capital. Mega Bank Limited (MEGA) has undergone in the merger process with Tourism Development Bank Limited (TDBL). It will meet its capital requirement after this merger process. Other five commercial banks will be issuing right shares, bonus shares, FPOs or may go into merger process for meeting up the capital requirement.

In terms of Reserve, NIB has highest reserve of Rs 10.98 arba which is followed by ADBL with reserve of Rs. 9.65 arba which is strongest part of these giant banks. CCBL with only Rs 1.21 arba has lowest reserve among 28 banks which signifies that it is the weakest bank in terms of reserve.

After meeting the capital requirement, most of the banks succeed to hike their net profit as well, but the growth with respect to capital increase seems unsatisfactory as growth of net profit is comparatively lower with respect to capital increase which directly results into diminish in Earning Per Share (EPS). The growth of the banks cannot be seen as only 4 commercial banks were successful to gain net profit more than NRs. 2 arba namely Nepal Investment Bank Limited (NIB), Rastriya Banijya Bank Limited (RBB), Nabil Bank Limited (NABIL) and Nepal Bank Limited (NBL). RBB is the only commercial bank not listed in Nepal Stock Exchange (NEPSE) but it stood on top of the table in terms of Net profit i.e. NRs. 3.08 arba. Civil Bank Limited (CBL) has earned lowest net profit of Rs 36 crore among the 28 commercial banks.

| Table showing major fundamental ratios |              |          |          |                     |          |          |           |

Table 2: Fundamental Ratios

Note:

Table is sorted in descending order i.e. highest EPS being first.

The closing price provided in the financial reports is taken into consideration for the calculation of PE Ratio.

MEGA Bank's LTP before merger has been taken into consideration. Its adjusted P/E will be 29.47 times.

In terms of EPS, Rastriya Banijya Bank Limited (RBB), Nabil Bank Limited (NABIL) and Nepal Bank Limited (NBL) stood on top 3 with an annualized EPS of Rs. 47.88, Rs. 46.40 and Rs. 42.57 respectively in the third quarter of FY 2074/75. Nepal Investment Bank Limited (NIB) and NMB Bank Limited (NMB) have EPS greater than Rs. 30.

10 banks—namely Everest Bank Limited (EBL), Himalayan Bank Limited (HBL), Standard Chartered Bank Limited (SCB), Agriculture Development Bank Limited (ADBL), SBI Bank Limited (SBI), Prime Commercial Bank Limited (PCBL), Global IME Bank Limited (GBIME), Siddhartha Bank Limited (SBL), Sanima Bank Limited (SANIMA) and Bank of Kathmandu Limited (BOKL) were successful in maintaining EPS greater than Rs. 20. Similarly, 4 banks, Century Commercial Bank Limited (CCBL), Janata Bank Nepal Limited (JBNL), Mega Bank Limited (MEGA) and Civil Bank Limited (CBL) have EPS less than Rs. 10.

Nabil Bank Limited (NABIL) topped among 28 banks in terms of Net worth per share with Rs. 210.27 where it has P/E ratio of only 21.31 times and Nepal Investment Bank Limited (NIB) stood second with net worth per share of Rs. 202.18. Century Commercial Bank Limited (CCBL) stood at last with Net worth of Rs. 114.04. MEGA & SCB have highest PE ratio i.e. 47.33 times and 34.03 times in third quarter report of 2074/75.

## 2. Learning process

Practice is the key to learning. The process of my learning at IMS can be briefed as below.

First of all, I was guided by my supervisor. I was responsible for data entry of the financial reports of the listed companies in NEPSE. By collecting those data, I needed to analyze them. I used Microsoft excel for recording the data. After analyzing, a news article is prepared and then published in a website i.e. Sharesansar.com.

For the hypothetical portfolio, I used the guidelines provided in the classroom. I collected the data from the website of Nepal Rastra Bank (NRB), Sharesansar.com, merolagani.com, etc.

In order to carry out the job, my classroom knowledge came of great help. A lot of the theories and formulas were indirectly supporting me in determining the factors I need to look into. However, in the course of learning I also came across the gap between the theory and practice.

## 3. Project

During the internship tenure, I also developed a hypothetical portfolio of the stocks of the companies listed in NEPSE.

a. Activities

- i. Choosing 10 stocks of 10 different companies listed in Nepal Stock Exchange.
- ii. Noting at least recent 70 to 80 historical weekend price data/indices of these stocks.
- iii. Noting at least 70 to 80 historical weekend NEPSE index – of the same weeks for which you've noted the price/indices of the 10 stocks.
- iv. Noting at least 5 recent historical risk-free rates (91 days T-bill rate issued by Nepal Rastra Bank).

b. Companies Selected:

- i. Agriculture Development Bank Limited (ADBL)
- ii. Unilever Nepal limited (UNL)
- iii. Soaltee Hotel Limited (SHL)
- iv. Nepal Doorsanchar Company Limited (NTC)
- v. Chilime Hydropower Company Limited (CHCL)
- vi. Goodwill finance Limited (GFCL)
- vii. Nepal Life Insurance Company (NLIC)
- viii. Nabil Bank Limited (NABIL)
- ix. Global IME Bank Limited (GBIME)
- x. Nabil Equity Fund (NEF)

Activities:

Calculation of the expected return and variance/standard deviation of the portfolio is depended on the followings:

- i. Matrix Method of calculating Portfolio Variance and Standard Deviation
- ii. Expected return of each stocks chosen over the period
- iii. Standard deviation of each stocks' return chosen over the period
- iv. Weights as given above for the stocks chosen
- v. Covariance (or correlation coefficient) between each stock pairs.

All the calculations were done in Microsoft Excel. The expected return, variances, standard deviation, range, Coefficient of Variance, and Risk premium are calculated and formed a table.

The descriptive statistics is shown below.

|                   | Expected<br>Return | Variance | Standard<br>Deviation | Highest<br>Value | Lowest<br>Value | Range | CV         | Risk<br>Prem. |
|-------------------|--------------------|----------|-----------------------|------------------|-----------------|-------|------------|---------------|
| ADBL              | 0.00               | 0.00     | 0.05                  | 0.18             | -0.10           | 0.28  | -<br>71.42 |               |

Table 4: Co-relation matrix

Correlation means the relationship between the two stocks. Here, positive correlation means the stocks moves along with each other and negative correlation means that the stocks moves in the opposite direction. Which means that suppose, the correlation of stocks ADBL and UNL is -0.44 which means that if the stock price of ADBL increases, the price of UNL decreases, and vice-versa. Also, the correlation of stocks ADBL and SHL is 0.29 which is positive hence, they move along with each other stating increase in price of one stock means increase in the price of other and decrease in price when one of the stock's price decreases.

| Covariance |           |            |           |          |            |           |           |           |          |         |           |

Table 6: Variance/ Co-variance Matrix

The matrix that contains the variances and covariances associated with several variables is known as a variance-covariance matrix. The elements in diagonal in the matrix contain the variances of the variables and off-diagonal elements contain the covariances between all possible pairs of variables.

Labelling each of the company is done as Stock 1, 2, 3, 4 and 5. Henceforth, the label given to these companies will not change.

| Portfolio of 5 Stocks |                 |         |                |                  |               |               |
|-----------------------|-----------------|---------|----------------|------------------|---------------|---------------|
|                       | Expected Return | Weights | Available Fund | Amount Allocated | Closing Price | No. of Shares |

| Total                 | 0.1139          | 100%    |                | 10000000         |               | 141849        |

Table 7: Hypothetical Portfolio of 5 stocks

After the selection of portfolio, the following activities is performed:

1. Calculation alpha and beta of each stocks by regressing it with the market return data within the period.
  - i. Market return is taken as independent variable and stock return as dependent variable in each case and regression of these two variables is done to find out alpha and beta.

|       | Alpha  | Beta   |
|-------|--------|--------|
| ADBL  | -0.002 | 0.277  |
| UNL   | 0.008  | -0.048 |
| SHL   | 0.023  | 0.212  |
| NTC   | 0.002  | 0.066  |
| NLIC  | 0.008  | -0.142 |
| CHCL  | 0.010  | 0.137  |
| NABIL | -0.004 | 0.571  |
| GBIME | -0.005 | 0.197  |
| GFCL  | 0.024  | -1.305 |
| NEF   | 0.002  | 0.064  |

Table 8: Alpha and beta of the Stocks

The companies with beta=0 means that there is no risk and which is not possible. Hence, with beta 0 it doesn't move along with the market.

2. The standard error of estimation for alpha and beta calculated for each stock is found out.

| Standard Error |          |
|----------------|----------|
| For Alpha      | 0.003256 |
| For Beta       | 0.15778  |

Table 9: Standard error

3. CAPM equation (SML) is used to find out required rate of return for each stock and compare it with the expected (average) return to find which stock is overvalued and which stock is undervalued.

| Stocks | Beta  | Alpha  | Required Return | Expected Return | Status       |
|--------|-------|--------|-----------------|-----------------|--------------|
| ADBL   | 0.28  | -0.002 | 2.26            | -0.09           | Over Valued  |

Table 10: Overvalued and Undervalued stocks

- c. Portfolio Management and Evaluation:
- With respect to the numbers of 5 stocks in the portfolio, we find out the value of the portfolio on last Monday (1<sup>st</sup> March) (if stock market was closed last Monday, first day of trading on that week is taken)

Chosen 5 Stocks

|                | Expected Return | Weights | Covariance | Available Fund | Amount Allocated | Closing Price | No. of Shares |
|----------------|-----------------|---------|------------|----------------|------------------|---------------|---------------|
| Stock 1 (ADBL) | 0.0044          | 10%     | 0.121      | 10000000       | 1000000          | 588           | 1701          |
| Stock 2 (NEF)  | 0.0004          | 20%     | 0.002      | 10000000       | 2000000          | 15.9          | 125786        |
| Stock 3 (GFCL) | 0.1063          | 20%     | 29416.23   | 10000000       | 2000000          | 214           | 9346          |
| Stock 4 (CHCL) | 0.0002          | 20%     | 0.197      | 10000000       | 2000000          | 2738          | 730           |
| Stock 5 (NTC)  | 0.0026          | 30%     | 0.55       | 10000000       | 3000000          | 700           | 4286          |
| Total          | 0.1139          | 100%    |            |                | 10000000         |               | 141849        |

Table 11:chosen 5 Stocks

- i. Since the new weights of each stock in chosen portfolio has changed, new weights are calculated.

**New Portfolio**

|                | No. of Shares | Price | Net Worth<br>(March 17) | Weight |
|----------------|---------------|-------|-------------------------|--------|
| Stock 1 (ADBL) | 1701          | 666   | 1132866                 | 12%    |
| Stock 2 (NEF)  | 125786        | 15.85 | 1993708.1               | 22%    |
| Stock 3 (GFCL) | 9346          | 233   | 2177618                 | 23%    |
| Stock 4 (CHCL) | 730           | 1,315 | 959950                  | 10%    |
| Stock 5 (NTC)  | 4286          | 702   | 3008772                 | 32%    |
| Total          |               |       | 9272914.1               |        |

Table 12: New hypothetical Portfolio

- ii. With these new weights of last Monday (1<sup>st</sup> March) Calculation of the beta of the portfolio is done.

|       | Beta  | Standard Error |
|-------|-------|----------------|
| ADBL  | 0.28  | 6.72           |
| UNL   | -0.05 | 507.65         |
| SHL   | 0.21  | 5.50           |
| NTC   | 0.07  | 3.01           |
| NLIC  | -0.14 | 70.67          |
| CHCL  | 0.14  | 8.40           |
| NABIL | 0.57  | 31.95          |
| GBIME | 0.20  | 9.33           |
| GFCL  | -1.31 | 1.33           |
| NEF   | 0.06  | 0.12           |
| NEPSE | 1.00  | 13.32          |

Table 13: Beta and Standard error of new portfolio

Here, Beta means risk. There cannot be a company without risk. The companies with beta=0 means that there is no risk and which is not possible. Hence, with beta 0 it doesn't move along with the market i.e. NEPSE.

## Learnings

From the above outcomes, If I have to invest Nrs. 10,000,000 in real life, my decision to invest would mostly be the same. However, I would switch from Agricultural Development Bank Limited (ADBL) to standard Chartered Bank (SCB). Therefore, the five companies that I would invest in are: Standard Chartered Bank (SCB), Nabil Equity Fund (NEF), Goodwill Finance Limited (GFCL), Chilime Hydropower Company Limited (CHCL) and Nepal Doorsanchar Company (NTC).

Being a student, my basic investment objective would be to earn moderate returns without taking a high risk. Hence, I have come up with a highly diversified portfolio comprising of Commercial banks, Finance companies, Government organizations, Hydropower companies and Mutual fund in order to diversify my portfolio over a wide range of companies.

All of the companies mentioned above are well known companies in the market who have already created brands of themselves. The prices of the shares of these companies are comparatively affordable for us. Similarly, these companies have been providing fair amounts of dividends in the recent years. The EPS of the above listed shares are pretty good and they have also been providing fair rates of returns. I decided to switch from ADBL to SCB because, when I analyzed the banks, I saw that the profits and returns and other factors of SCB were more attractive than that of ADBL.

This project was very beneficial for me because of its relevance with the real-life scenario as I actually looked into the stock prices and took the real data for all the calculations. The first thing I learnt through this project is to analyze the stock prices of various companies and to interpret those data in the real-life scenario. I learnt the basis of making fundamental analysis to evaluate the companies and choose the ones to invest in. I gained knowledge and experience to create my own investment portfolio and the things that should be considered before making one. I also learned about the importance of diversification in order to reduce the overall risk of the portfolio. I learned the impact of covariance and correlation while diversifying a portfolio. I also learned a lot about SML and SCL and how they are important while evaluating stocks. Similarly, I learned the market scenario of Nepal and how unmanaged and inefficient our market is when it comes to stock trading.

## **Chapter 5: Conclusions**

### **1. Self-assessment as future professional**

The process through which one becomes aware of their strengths and weaknesses, abilities and skills, values, interests, goals and aspirations is termed as self-assessment. It assists employees and supervisors in preparing for performance evaluation. It allows us to contribute to the performance discussion by completing the self-assessment.

Talking about self, I am regular at work with a great attendance track record. In time of challenges, I try and maintain neutral behavior and effort to motivate my colleagues to keep up passion during such times. I try to remain positive and cheerful most of the times at workplace. I guarantee to maintain a smooth flow of communication from the colleagues to the management and vice versa. I am able to handle the customers with negative feedback and try to resolve the related issues.

I may appear to be dull at times towards my colleagues while I remain focused on the task which I am trying to rectify. According to my style of communication, I know that not all my colleagues may be comfortable. However, my aim is to get the job done, on time, with results without any intentional personal outbreak on anyone. Time management is not my core strength as well, and I try to improve it to have a better time management. I do understand that though I complete projects within the specified deadline, it is not enough. I understand and realize the value of communication with the management as well as with my colleagues. In order to avoid any miscommunication, I look forward in improving my communication skills. As an individual, I have realized that I am more practical than creative. This trait of mine sometimes hampers me from providing innovative solutions during challenging situations. I try my best to take positive risks in my job and try providing creative solutions as requirement when I can. I understand that I rely a lot on group effort. However, I am working towards it to confirm that I am able to participate equally or even more than my team members. I have tried to keep the instances of negative feedback from the customers at a minimal since customer relations is not my strength.

### **2. Comparison of practical learning VS theory**

This report reflects the activities performed at IMS Investment Management Services Pvt. Ltd. In the tenure of my cooperative program, I was assigned as a Media/Research Officer at Investment Management Services. Most of the things that I performed as a duty in my cooperative program was taught during my academic course.

The knowledge I gained from my institution helped me cope up with the duties assigned at IMS. Most of the activities that were assigned was related

to my study. I was able to implement my knowledge and get the job done easily and on time. Bookish information is subjected to classroom learning and that can't be flawless and full. In any case, Practical learning includes our own particular involvement in the topic and that gives us top to bottom information of the reality. Practical knowledge holds greater importance than theoretical knowledge.

Theories are more of a setup and guideline which assist in practical world for achieving targeted goal. By the help of theoretical knowledge, the work in real life was easier. I required guidance for parts of the work done in the subject matter, other than that I was able to assist my team with my classroom theoretical learning in English usage and writings and other excel and word skills.

Both theoretical as well as practical information are as important as two sides of a coin. In my case, I had learnt about the financial and capital markets in the classroom. By interning here at IMS Investment Management Services Pvt. Ltd.(IMS), I had an opportunity to implement those theoretical knowledge in the real time market. In my case, I studied Company analysis i.e. fundamental analysis and technical analysis. In my workplace, I implemented fundamental analysis theory when working for publishing an article in the website of the IMS Investment Management Services (IMS) i.e. Sharesansar.com. I analyzed 28 Commercial Banks of Nepal fundamentally by taking Paid-up capital, Reserves, Earnings per Share (EPS), Price-Earnings ratio (P/E ratio), Net worth per share and Net Profit. Hence, I can say that theoretical knowledge assisted me throughout my practical world.
